Research Profile

My work centers on how many factors are really there in a scale, and how that decision holds up under ordinal and mixed-format data, cross-loadings, hierarchical and bifactor structures, and departures from standard assumptions — mostly through large Monte Carlo simulation studies. I extend this into mixture modeling, using finite mixture, latent class, and factor mixture models to uncover unobserved respondent subgroups (careless or disengaged responders, distinct response styles) and to test whether measurement properties hold across them. Alongside the factor-analytic tradition, I use psychometric network models as a complementary lens on construct structure. A fourth line applies these questions to large-scale assessment, studying measurement invariance and item-format effects using PISA, PIRLS, TIMSS, and ICILS data.

Research Interests

Factor analytic framework	Factor retention methods (parallel analysis, exploratory graph analysis, Hull, comparison data, empirical Kaiser) under ordinal and mixed-format indicators, cross-loadings, and hierarchical/bifactor structures; and their consequences for reliability (alpha, omega) under missing data, correlated errors, and item wording effects.
Mixture modeling	Finite mixture, latent class/profile, and factor mixture models for uncovering unobserved respondent subgroups and testing measurement invariance across them.
Network psychometrics	Regularized partial correlation networks and exploratory graph analysis as a complementary lens on construct structure and dimensionality.
Large-scale assessment	Measurement invariance (MGCFA, alignment optimization) and item-format effects in PISA, PIRLS, TIMSS, and ICILS.

Education

2025 – Present	**PhD, Educational Measurement and Evaluation** *Hacettepe University*
2024	**MSc, Educational Measurement and Evaluation** *Hacettepe University* *Thesis: Comparison of factor retention methods in exploratory factor analysis under various conditions*
2021	**BSc, Primary School Education** (GPA 3.51) *Anadolu University*
